

## ACM for AutoCAD Menu System

**Mechanical, Electrical, Plumbing, and Fire Protection Design Tool** ( for AutoCAD )

ACM Menu System is a complete A/M/E/P/FP AutoCAD menu system that completely organizes the drafting process for engineering firms that specialize in MEP CAD work. Best fit is for mechanical, electrical, civil, architectural, and other consultants and facilities departments.

The program is a very powerful, easy to learn, 2-D menu system for Architectural and Engineering consultants. The menu system incorporates the following disciplines:

- Architectural
- HVAC
- Plumbing
- Fire Protection
- Electrical Power / Systems
- Electrical Lighting

ACM also incorporates time-saving drafting tools such as sheet setup, layer convention setup, drawing manipulation utilities, and pre-made reference notes and bubble utilities. Unlike other third party add-ons, it is designed for speed in producing drawings.

### FEATURES

- Easy to Learn.
- Easy to Use.
- No Memory Upgrade Required.
- Improves Office Efficiency.
- Instantly Sets Office Standards.
- Customizable.
- Uses AIA, ASHRAE, NEC, ASPE, NFPA Standard Symbols
- Pop-up Manual.

### ***Instant Office Standards!***

One of the biggest problems in A/E firms is their lack of CAD Standards! **ACM** will instantly set layering, colors, plotting, and symbol standards on every drawing for every project. This will improve quality of your documents. Of course, you can customize most aspects of **ACM**.

**ACM** can be used with existing menu systems because it has many useful and highly efficient tools for production efficiency.

Does **ACM** have all the features of the high priced packages such as Softdesk, or others - absolutely not! These packages take 32mb of memory room and Pentium class computer to run effectively and cost around \$3,800 per computer. These packages also take an extensive time consuming learning curve and high intelligence when things go wrong. **ACM** is powerful yet affordable, and can run fast on any 486 or Pentium that runs AutoCAD 12 , 13 or 14 and can be learned in less than one day!

**ACM** has been used since 1992 by a variety of satisfied Architectural and M/E/P consulting firms. It has been used to produce over 1,000 actual projects. It is constantly being updated to add more time saving features and speed.

### ***What It Does***

ACM draws the following systems fast:

- Architectural walls, doors, windows, room names, sheet titles, detail titles, notes etc.
- HVAC single and double line ductwork, diffusers, VAV boxes, dampers (all kinds), flex duct, AHU, heating coils, and all other symbols used in HVAC drawings. All symbols are in strict accordance with ASHRAE standards.
- Electrical receptacles, lighting fixtures (all kinds), fire alarm symbols, data and communication symbols, circuiting tools, and much more all in accordance with NEC and ANSI standards.
- Plumbing fixtures, piping (water, waste, storm, gas, etc.) with appropriate line types, floor drains and everything else needed to produce plumbing drawings in accordance with ANSI and ASPE standards.
- Fire protection sprinkler grids (really fast!), piping, and all symbols in accordance with NFPA 13 standards.

Of course, you may customize any symbol to your office standards. In addition, if you already are using a menu system, ACM can be used in conjunction because we guarantee your menu system does not have all the time saving features of ACM.

### **Requirements**

**AutoCAD 14 or 2000.**

**Windows 95, 98, Me, NT, 2000, or XP**

**Hardware: Any system that runs AutoCAD 14 or 2000**

If you are ready to start making money with CAD, [Order Now!](#) If you think its too good to be true, then e-mail us with your questions. Our engineers will be happy to answer your questions.
